## Optimal Integration

When to Combine Conventional  
Treatment with Ancient Ayurveda  
based Nutrient Energy Therapy.

“ —

"Cancer cells profoundly compromise the body's health, while tumors inflict severe pain on patients. Therefore, alongside ancient Ayurveda-based treatment, managing symptoms through surgery, radiotherapy, and carefully administered chemotherapy is crucial. As patients respond to ancient Ayurveda-based therapies, these interventions also help minimize these distressing symptoms."

Dr. U.S. Tiwari and Professor S.S. Trivedi,  
Founding Pioneers of D.S. Research Centre

# Harmonizing Cancer Treatment and Quality of Life

Using strong medications to treat cancer symptoms can sometimes make the disease more aggressive. However, these medications are necessary for immediate relief from pain caused by cancer cells and tumors. Patients and their families undergoing ancient Ayurveda-based nutrient energy therapy should prioritize the patient's quality of life. In emergencies, conventional medical treatments are essential.

# When the pain becomes unbearable.

As per the doctor's advice, pain-relief medication can be taken as needed for severe pain. However, it's crucial to understand that overuse of painkillers can cause additional health problems. Painkillers only alleviate the symptoms and do not help in controlling the disease itself.

## When experiencing extreme weakness and fatigue.

The fatigue and weakness caused by cancer are often challenging to bear. In advanced stages, treatments aimed at eliminating tumors and cancer cells can bring additional problems like fluid retention, pain, insomnia, and loss of appetite, further weakening the patient.

In these tough times, it's crucial to work closely with a caring and experienced doctor to find ways to alleviate this weakness and help the patient regain strength and vitality.

## When there's discomfort due to wounds and tumors.

If a cancer patient has a tumor, it's recommended to combine traditional Ayurvedic energy therapy with timely surgery. The goal of tumor surgery isn't to cure cancer but to offer temporary relief from discomfort and lessen sudden crises. Tumors in cancer are abnormal accumulations in the body, which the body eventually eliminates naturally. However, after this process, wounds are left that cannot be healed or dried in any way.

## When there is fluid accumulation in any part of the body or a condition of edema.

Cancer patients, especially those with brain, liver, stomach, ovaries, etc., often struggle with fluid accumulation in the body. This fluid is released by the body's cells and its excessiveness leads to various issues. In such situations, it's important to seek help from skilled doctors or hospitals.

## When there is fluid accumulation in the lungs.

Patients with lung cancer often experience fluid accumulation in the lungs, along with symptoms like shortness of breath, coughing, phlegm, and chest pain. In such specific situations, seeking help from skilled doctors or hospitals is essential.

## **When there is a condition of blocked or obstructed breathing.**

Patients with throat or lung cancer often experience obstructed breathing. In such situations, it's advisable to get a tracheostomy (a surgical procedure to create an opening in the windpipe) from a skilled surgeon.

## When a cancer patient needs a feeding tube.

When a cancer patient is unable to consume liquid food due to throat cancer, they should consider having a feeding tube inserted by a skilled surgeon. This tube facilitates direct delivery of food to the stomach, and medications and supplements can also be administered through it by dissolving them in water.

## When there is a condition of obstructed bile ducts.

Liver, gallbladder, pancreas, CBD (Common Bile Duct), and spleen cancer patients often face digestion-related issues, nausea, jaundice, pain, and other problems. These patients often develop obstructive jaundice, where medication for jaundice doesn't work effectively.

In severe **jaundice** cases, a bypass surgery can be done to insert a tube that drains bile from the liver, easing jaundice symptoms. Liver cancer patients often have a higher body temperature from noon to midnight. Fever medicine should be taken only if the temperature goes above a hundred degrees. When the situation improves, both jaundice and high body temperature ease up.

A stent can be inserted into the patient's liver to clear blocked bile ducts and alleviate symptoms of jaundice. The sooner the stent is placed, the less severe the symptoms tend to be.

# Managing Blood Cancer Symptoms

Patients with blood cancer often face issues like pain, swelling, weakness, and mouth bleeding. It's crucial to seek help from a hospital or doctor immediately in such situations. Blood cancer can be life-threatening, especially in cases of serious infection or uncontrolled bleeding. Immediate medical attention is essential to manage these emergencies effectively.

Patients with **Acute Myeloid Leukemia (AML)** and **Acute Lymphoblastic Leukemia (ALL)** should stay near a good hospital due to the risk of sudden emergencies. In such cases, immediate medical assistance is crucial. Along with our specialized treatments, regular consultations with doctors or hospitals are essential to maintain proper blood counts and overall health.

\*

**Patients with Chronic Lymphocytic Leukemia (CLL) and Chronic Myeloid Leukemia (CML) can benefit greatly from our specialized treatments. However, when the White Blood Cell (WBC) count exceeds 60,000, it's crucial to use appropriate maintenance therapy to manage it. Once the WBC count drops below 20,000, you should discontinue this maintenance therapy.**

Following this process can help reduce dependence on conventional medications in the future.

## **When there is an emergency situation in Hodgkin's or Non-Hodgkin's disease!**

Patients with Hodgkin's or Non-Hodgkin's disease often face the problem of developing lumps or nodes in the body. In such cases, along with nutritional therapy, seeking help from a cancer specialist or hospital as needed can be beneficial.

## When there is an emergency situation in brain cancer.

Patients with brain cancer often complain of nausea, memory confusion, and paralysis of the lower limbs. Usually, there is no immediate solution to these problems. Nevertheless, they should be under the care of a good doctor.

**For patients with prostate, sarcoma (bone), multiple myeloma, and other bone-related cancers.**

Cancer patients with bone issues should avoid physical stress and strain. Avoid applying pressure or massaging vigorously in areas with affected bones. It's important to minimize walking and physical exertion. Use pain-relieving medication only in case of severe pain.

## Prostate, kidney, urinary bladder

Patients with prostate, kidney, and urinary bladder issues may experience symptoms like urinary retention, blood in the urine, burning sensations, and pain. It's crucial to seek immediate help from a qualified doctor or hospital when these problems arise. Those undergoing Ancient Ayurveda based therapy for urinary bladder conditions might also face blood flow issues. In such cases, consulting a cancer hospital is highly recommended for appropriate care and management.

## If you want to stop the treatment, what should you do?

In cases where there is a need for the patient's health issues, it's essential to seek the assistance of skilled doctors. If someone feels scientifically that the medicine derived from ancient Ayurvedic nutritional energy is not effective for a patient, they can discontinue the medication after eight to twelve weeks. It's advisable to consult with the center specialising in this matter, as they will provide unbiased advice after studying the patient's file.

## **Your input about our workflows is important!**

This booklet is designed to support cancer patients and their families in navigating their medical journey with D.S. Research Centre. Our team is committed to offering comprehensive assistance to those impacted by cancer. Whether you're at the initial stages of diagnosis or further along in treatment, we trust this booklet will provide valuable insights and answers to your queries. Your feedback is crucial in enhancing our services. For further inquiries, please email us at [info@dsresearchcentre.org](mailto:info@dsresearchcentre.org).

# A Beacon of Hope and Healing.

D.S. Research Centre is a pioneering institution specializing in nutrient energy therapy based on ancient Ayurveda. With centers in Varanasi, Kolkata, Guwahati, Bangalore, Mumbai, and Hyderabad, it represents a beacon of hope for cancer patients.

Through its innovative approach, D.S. Research Centre combines ancient wisdom with modern science to treat cancer, fostering optimism and renewed vitality. The center aims to guide patients toward healing and a brighter future.
